The Westfall Model 2800 Wafer Style Static Mixer has a slim profile, yet delivers rapid mixing with very low headloss. Its computer-designed orifice with bent tabs generates complete mixing through a combination of alternate vortex shedding and intense shear zone turbulence.

High performance, short laying length, simple installation and no maintenance requirements make the 2800 the mixer of choice for almost any application. Its thin profile allows it to be air shipped anywhere in the world at relatively low cost. It is the space-saving and money-saving solution for any installation.

**Advantages**
- Excellent Mixing
- Low Cost
- Short Laying Length
- Integral Injection Fittings
- Low Headloss
- Easy Installation
- Long Service Life
- No Maintenance Requirements
- No Moving Parts
- Available in pipe diameters up to 120”
- Available in Any Material: PVC, FR, 316 Stainless Steel, Titanium, Kinar, Teflon, etc.

**Typical Applications**
If you operate any of the following processes, you could benefit from installing Westfall Model 2900 Variable Flow Static Mixers:
- Water Treatment
- Chemical Blending
- Dissolving Gases
- Polymer Blending
- Flocculant Blending
- pH Control
- Potable Water
- Waste Water
- Chlorination
- De-Chlorination
Simple, Elegant Design Does the Job Efficiently

The Westfall Model 2800 Static Mixer features a uniquely shaped orifice with two bent tabs. The orifice and the angle of the tabs were computer designed and tested to arrive at the optimal shape for mixing with minimal headloss. There are no moving parts to service or attract residue. Suitable for a wide range of applications, the 2800 is highly effective, compact and economical.

Clean Water Plant Conversion Project In Maine

The Portland Water District needed to convert a major chlorine gas feed system to liquid sodium hypochlorite to eliminate hazards and enhance chlorine residual throughout the distribution system. Problems included limited available head in the main between the ozone contactor and the clearwell, low velocities and limited laying length and mixing zone. Engineering company Wright-Pierce Civil and Environmental Engineering Services selected a Westfall Model 2800 60-inch mixer for the application.

Upon commissioning of the new mixer, the treatment staff noticed an immediate and significant improvement in chlorine residuals. Wright-Pierce’s Senior Project manager, Robert J. Williamson, says, “The Westfall mixer stabilized chlorine residual levels in the clearwell over the full range of plant flows. As a result the District has seen an increase and stabilization in residuals further out into the distribution system.” Even in spring, when in the past the plant typically dealt with its worst oscillations in pH and chlorine residual, personnel reported “rock steady residual numbers”.

The thin profile of the Westfall Model 2800 mixer makes it feasible to air ship anywhere in the world. The short laying length is a fraction of traditional mixers, making it less costly to produce, ship, install and maintain.

The thin profile of the Westfall Model 2800 mixer makes it feasible to air ship anywhere in the world. The short laying length is a fraction of traditional mixers, making it less costly to produce, ship, install and maintain.

Florida Facility Needed Compact Performer

A municipal water treatment facility in Florida needed a mixer that could do the job where space was at a premium. The budget was tight and quality specifications had to be met. The Westfall Model 2800 provided the answer.

Arizona Treatment Plant Installs
Model 2800 Mixers in Special Materials

When Currier Construction Inc. built a water treatment plant West of Tucson, they required mixers that could hold their own against the caustic chemicals — Chlorine Sodium Hypochlorite, Sulfuric Acid and Sodium Hydroxide — used to correct pH, chlorinate, disinfect and oxidate.

They installed two 8” and two 6” Westfall Model 2800 Mixers, one made of PVC, with CPVC corp-stop and a PVC solution tube diffuser, and the others made of 25% Glass filled PTFE (Teflon®) with corp-stops and solution tube diffusers made of PVDF (Kynar®). The gaskets are all EPDM.

Chuck Reading of REACO Associates LLC says, “Westfall supplied the corp-stops and solution tube diffusers, fitting them and trimming the tubes to the precise spot at the center of the tongue (or bent tab) of the mixer,” to facilitate optimal mixing.

Four Westfall Model 2800 Mixers are integral to the system that pre-treats the raw water before it is fed into the filtration tanks for arsenic treatment.

The six and eight-inch diameter Westfall 2800 mixers used in this plant in Ajo, Arizona, have laying lengths between 2.678” and 3”, depending on the corp-stop being used.

See Our Web Site for Our Complete Product Line, Including:

- The Model 2850 Inline Static Mixer was designed for applications requiring precision chemical blending. The 2850 consists of a Model 2800 Mixer built into a custom spool piece to fit any size laying length.
- The Model 2900 Variable Flow Mixer was designed to accommodate situations where flow fluctuates widely.

- .9 Beta: K = 6.78
Standard and Custom Designs and Materials

- Materials of Construction: PVC, FRP, 316 Stainless Steel, Titanium, etc.
- Custom materials and configurations are available, with manual or automatic controls
- Mixer plates are offered in 0.7 – 0.9 -Beta ratios

Mixer Plate Beta Openings

Alden laboratory CoV = .008 for .7 beta ratio with excellent mixing at 1-3 FPS
Alden laboratory CoV = .009 for .8 beta ratio with excellent mixing at 3-8 FPS
Alden laboratory CoV = .050 for .9 beta ratio with excellent mixing at 8-11 FPS

CoV = standard deviation of the test data divided by the average of the test data
Westfall Static Mixer

Experience
Westfall Manufacturing Company has extensive experience in the water, wastewater and industrial markets. We have manufactured more than 10,000 Venturi meters since 1965 and more than 2,500 vacuum D.E. filters since 1955. Westfall has been the primary supplier of water treatment components for numerous original equipment manufacturers. We at Westfall are proud of this record of successful applications.

Standard and Custom Designs and Materials:
Standard materials are Fiberglass Reinforced Vinyl Ester resin body with type 316 stainless steel mixer plate. Other materials are available on request. Special size rings, mixer plates and injection fittings can be fabricated to meet specific requirements.

Typical Applications:
Typical applications for the Westfall Static Mixers are:
- Water Treatment
- Chemical Blending
- Dissolving Gases
- Contacting
- Polymer Blending
- Flocculant Blending

Description:
The Westfall Static Mixer is a motionless static mixer in which fluids are injected and rapidly mixed by a combination of alternate vortex shedding and intense shear zone turbulence.

Description - Tests - Specifications

Typical Specifications:
The Static Mixer shall be of a compact ring body design for mounting between two standard pipe flanges. The ring body shall be a minimum thickness of 0.875 inches and shall be fabricated from ________.

Ring type neoprene gaskets shall be furnished and adhered to both sides of the mixer body. The mixer plate shall be computer designed to provide a geometric shape which will create the mixing vorticies to effectively mix the injected fluid(s) with the main process fluid. The average variation in the process stream of the injected fluid, shall be within 1% of the mean value at 10 pipe diameters downstream of the mixer. The mixing plate shall be no less than 0.125 inches thick and shall be formed from type 316 stainless steel. The mixer plate shall be mounted in a machined cavity on the upstream side of the ring body. The body shall include one or more 316 stainless steel injection fittings. The mixer body and plate materials shall be suitable for handling _______ as the process fluid at the rate of ______ GPM, and ______ PSI. Injection fluids are ________.

The injection mixer shall be Westfall's Model 2800.

Available Sizes:
Mixers can be furnished to fit all line sizes 1/2” thru 48.” Contact the factory for other sizes. The standard ring body is 0.875” thick plus two .125” gaskets. Special thicknesses will be made to accommodate oversized fluid injection fittings or other requirements. Contact the factory for details.
Advantages of The Static Injection Mixer

- Low Cost
- Short Laying Length
- Integral Injection Fittings
- Predictable Mixing
- Easy Installation and Hook-up
- Long Service Life
- No Maintenance Requirements
- No Moving Parts
- Available in Any Material: PVC, FRP, 316 ST.STL., Titanium, etc.

Information Required for Express Service Quotation:
- Main Pipe Size and I.D.
- Main Line Fluid and Flow Rate
- Main Line Temperature, Pressure and Viscosity
- Quality of Injected Fluids
- Flow Rate, Temperature, Viscosity of Each Injected Fluid
- Material of Mixer Body Ring
- Material of Mixer Plate
- Injection Fitting Material
- Gasket Material
- Other Special Requirements

Other Westfall Products
- Vacuum Diatomaceous Earth Filter Systems
- Diatomaceous Earth Recovery Flumes
- D.E. and Dry Chemical Feeders
- 3-Way Control Valves
- Rotary Drum Filters
- Venturi Flow Meters
- Rate of Flow Controllers
